

FortiAuthenticator

FortiAuthenticator is Fortinet's Identity and Access Management solution establishing centralized identity platform. Which then can be utilized on FortiGate units through the Security Fabric. Or as FSSO or RADIUS server in older FortiOS. It can be used even by 3rd party network components like routers and switches for administrative access management, or for user port authentication 802.1x.

FortiAuthenticator provides following main capabilities:

- Centralized identity management for administrators and general users
- Fortinet Single Sign-on
- SAML-based Single Sign-on
- Multi-Factor Authentication in conjunction with FortiToken
- RADIUS Network access and policy service
- Integration with Windows Domain systems
- Basic Certificate Authority services
- Self-service portals
- Guest portals.

FortiAuthenticator comes in a variety of hardware and virtual form factors.

Hardware Appliances

- FAC-200D
- FAC-200E
- FAC-400C
- FAC-400D
- FAC-400E
- FAC-1000C
- FAC-1000D
- FAC-2000E
- FAC-3000D
- FAC-3000E

Supported Virtualization Platforms

- VMWare
- Hyper-V
- KVM
- XEN
